AM.SC.U4CSE25229	KRISHNA JAYAKUMAR
AM.SC.U4CSE25215	DHARUN A

Project Title : Smart Campus Resource Booking System

2.1. Functional requirements:

1. Login page with email and password fields and an error message for wrong credentials.
2. Navigation bar that shows the links for the logged-in user (Resources, My Bookings, Admin) and a Logout button.
3. Home page with a banner and a search/booking form to choose a resource and a start and end time.
4. Resource cards showing the resource name, category, location, capacity and a green Available / red Booked badge.
5. Book button on available cards and a disabled Unavailable button on the others.
6. Option on the booking form to join a waitlist when the requested slot is already taken.
7. My Bookings page with a table of bookings and their status, a Cancel button, the waitlist table and the notifications list.
8. Admin panel with a table of pending requests, a remarks box and Approve / Reject buttons.
9. Maintenance form and list in the admin panel to schedule maintenance for a resource.
10. Utilisation report table showing approved bookings and hours booked per resource.
11. Alert messages after every action to confirm success or explain an error.

2.2. Non functional requirements:

1. Usability: simple, consistent layout and navigation, so a booking takes only a few clicks.
2. Responsiveness: the resource cards use a grid that adjusts the number of columns to the screen width.
3. Visual consistency: one font (Inter), one blue colour theme and the same card and table style on every page.
4. Clear feedback: colour-coded status badges, alert banners and disabled buttons show what the user can and cannot do.
5. Readability: good colour contrast, comfortable spacing and clean table headers.
6. Safe actions: Cancel, Reject and Logout buttons are shown in red so they are not clicked by mistake.
7. Performance: lightweight pages with plain HTML and CSS and no heavy frameworks, so they load quickly.

2.3. List of AI tools used for building UI(if any):

1. Gemini
2. Claude

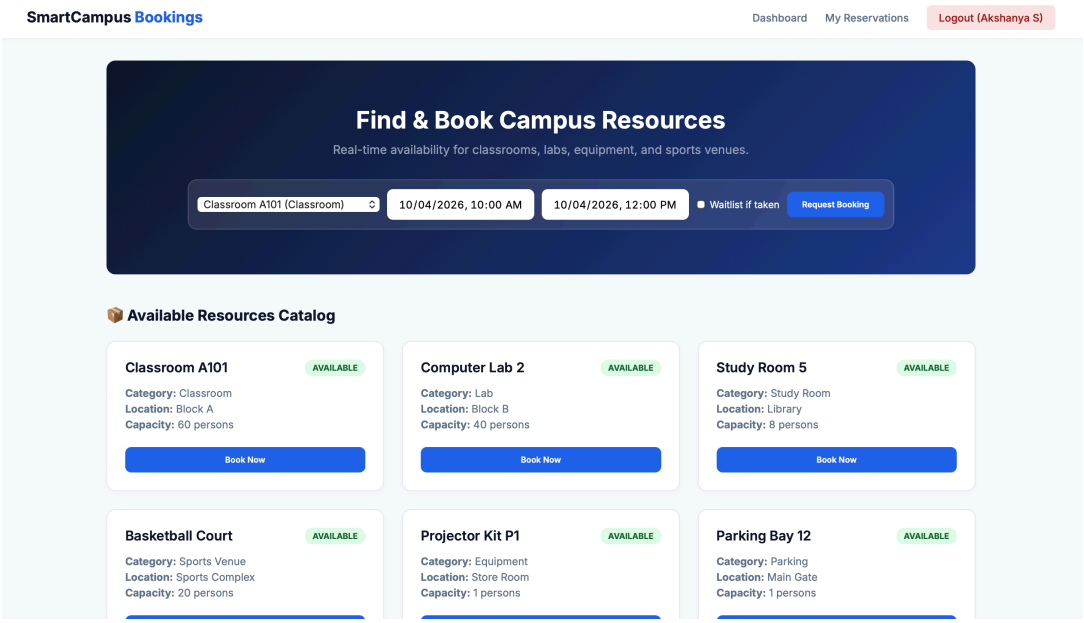

2.4. Prompt (if any) :

Sl. No	Name of the tool	prompts
1	Gemini	Give me a simple ui code in html and css that'll match my initial abstract for a Smart Campus Resource Booking System

2.5. List of files:

1. index.html
2. styles.css

2.6. UI Screenshot:

2.7. GitHub Link:
